RETURN TO WORK

Preventative Guidelines & Products for ensuring a safe working space for your employees.

This is a short guide intended to help you plan for keeping yourself, your teams and your workplace clean, safe and COVID free. Its broken down into 4 areas: PPE, HAND HYGIENE, SURFACE CLEANING, and SIGNAGE

The latest government advice is available from - www.gov.uk

Everyone has the right to work in a safe environment, and to reduce the risk, the government has recommended that every workplace increases the frequency of hand washing and surface cleaning.

HAND HYGIENE

To encourage good hand hygiene we recommend reviewing your current washroom setup and that soap, single use hand towels and clear signage is in place to promote good hand hygiene. We can also provide waste bins and hand sanitiser as an additional level of protection. Outside of the washroom we recommend that all staff have tissues and hand sanitising stations are available throughout the building, our hand sanitising station is a cost effective solution. But we also have free standing and wall mounted dispensers.

SURFACE CLEANING

We recommend that the frequency of cleaning is increased, especially high touch areas and that the disinfectant used is effective against enveloped viruses (Selgine, Virabact, or AX Ultra). To encourage this, employees should have access to anti bac surface wipes, or spray sanitisers and cloths/paper. For areas where there is heavy soiling or where an outbreak has occurred a 2 stage cleaning process will need to be put into effect. Stage 1 cleans. Stage 2 disinfects. Technology can help in the fight against Covid and the Storm is a exceptional product for sanitising quickly and easily - saving you time and money especially in labour & for soft furnishings steam cleaning is recommended.

PPE (Personal Protective Equipment)

PPE has and will remain a part of cleaning although the government has been reluctant to recommend that we use face masks in public, we believe that in an environment where social distancing cannot be adhered to safely then masks and face shields offer a barrier to the transition of airborne particles. We strongly recommend that masks and eye wear is made available to all cleaners, because spraying triggers can atomise the airborne particles and increase the risk. We'd also recommend that you consider household 'marigold' gloves over disposable as these can be reused and are therefore cheaper and more readily available than disposables. For high risk areas or for fogging/spraying coveralls and overshoes are also available.

SIGNAGE

Whilst adapting to this new norm its important that we remind people about social distancing and hand hygiene - we have a range of posters, floor decals and banners that can be implemented at any site. We will continue to try to update our website with the latest information and we remind you that in this fast moving environment products may not be exactly as pictured and pricing is just a guide.

If you require any advice or have any questions on how to clean or what to use please get in contact.

3-PLY DISPOSABLE FACE MASKS, Pack 50

Soft and comfortable protective disposable barrier mask
Code: **038.101**

IIR SURGICAL MASKS Pack 50

NHS Grade En14683
Fluid resistant face mask
Code: **038.102**

FFP2 FACE MASKS Pack 2

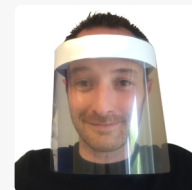

Kn95 equivalent complies with EN149:2001 - A1 2009
3-8hrs lifespan
Code: **038.105C**
